PROFESSIONAL PROFILE

ICT engineer with over 5 years of experience in backend development and software architecture. I specialize in modernizing legacy systems into APIs and microservices with .NET 10/9/8 and Java (Spring Boot), following Clean Architecture and deploying on Azure. I have been the tech lead of production projects for the financial and enterprise sectors. I integrate AI agents across the whole development cycle, and I led the AWS User Group Morelos community.

PROFESSIONAL EXPERIENCE

RYNDEM | Senior .NET Backend Developer | Oct 2024 – Present

- **Tech lead (project R18):** I define the architecture, the technical planning and the structure of the backend components.
- **Multi-region architecture:** .NET 10/9 and Azure SQL with parameterized regional settings for data from several countries.
- **Exchange Rate service:** End to end with .NET 10, Clean Architecture, SQL Server and LINQ; in production since January 2026.
- **Modernization:** Migrated a legacy executable (.NET Framework) to an API connected to Banxico and to BCRP (Peru).
- **Resilience and data:** Fallback with exponential backoff, schedulers and ETL processes to keep data available 24/7.
- **Performance:** Refactored the folio generator with threading and binary search: no duplicates, no gaps.

THOR SOLUTIONS | Full-stack Developer, SEUZ project | Aug – Sep 2026

- **SEUZ mobile app:** .NET MAUI (.NET 10, Android) for field operators: real-time chat, SOS button, telemetry and remote commands.
- **Real time and resilience:** SignalR with a hub on Azure, REST with Polly (retries and circuit breaker) and an offline queue so no message is lost.
- **Security:** Local database encrypted with SQLCipher, key stored in Android Keystore.
- **Quality and DevOps:** Clean Architecture with MVVM, 469 xUnit tests and CI on Azure DevOps; the APK went from 118 to 39 MB.
- **Applied AI:** 3 skills and 6 Claude Code agents built for the project, with mandatory PR review.

THOR SOLUTIONS | .NET Developer (Freelance) | Jun 2021 – Sep 2024

- **Modules from scratch:** Supplier management and geofencing with the Google Maps API: +30% user satisfaction.
- **SQL optimization:** 20% faster response times after redesigning stored procedures.
- **Mobile and CI/CD:** .NET MAUI apps on top of backend services, and pipelines on Azure DevOps with Scrum.

BANREGIO | Junior Programmer Analyst | Jan 2022 – May 2024

- **Migration to microservices:** Breaking down a legacy monolith for the loans area.
- **Java and Spring Boot:** Scalable solutions that protect the integrity of financial transactions.
- **Interoperability:** RESTful APIs documented with Swagger for the new distributed services.

PROJECTS | FULL-STACK DEVELOPER | MAY 2024 – PRESENT

- **ERP for an auto repair shop (in production):** .NET 9 with Clean Architecture and CQRS (MediatR), EF Core and Dapper on SQL Server. Versioned API with JWT, SignalR and health checks; CI/CD to Azure with SonarCloud, Snyk and Trivy, plus unit, integration and E2E tests.
- **Eckonatura POS (in production):** Point of sale for a café: tables, kitchen display (KDS), self-service kiosk, cash closing, inventory and purchasing. Real-time MAUI mobile app, Docker and automated deployment.
- **Remote evidence for fleets (proof of concept):** For a private security company: a MAUI Android app running as Device Owner (kiosk mode, uninstall lock) and a SignalR backend that requests and receives photos in real time. Validated on real hardware.

- **KodaMemo (open source):** Meeting recorder for Android with on-device speech-to-text (Whisper.net) and a Blazor web workspace for transcripts, agreements, tasks and mind maps.
- **FollowBaby (in development):** Offline-first child tracking app. .NET 10 with Clean Architecture and architecture tests, an API with PostgreSQL and JWT, and a MAUI app with encrypted SQLite and its own sync protocol.
- **Appraisal Management (in development):** A .NET 8 application with Dapper and SQL Server, layered with clean architecture to manage property appraisals; Azure deployment planned.

TECHNICAL SKILLS

- **Backend:** C#, .NET 10/9/8, ASP.NET Core, Java (Spring Boot), EF Core, Dapper, LINQ, SignalR, Polly, .NET MAUI
- **Data and cloud:** SQL Server (ETL, SP), Azure SQL, PostgreSQL, SQLite, Azure (App Service, VM), AWS
- **DevOps and quality:** Docker, GitHub Actions, Azure DevOps, xUnit, Playwright, SonarCloud, Snyk, Trivy
- **Frontend:** Astro, React, Angular, Blazor, HTML5, CSS3, JS, Bootstrap, jQuery
- **Architecture:** Clean Architecture, Microservices, CQRS (MediatR), REST, Swagger/OpenAPI
- **Tools:** AI agents (Claude Code), Google Maps API, Scrum, Jira

EDUCATION AND CERTIFICATIONS

- **B.Eng. in Information and Communication Technologies:** Universidad Tecnológica Emiliano Zapata (UTEZ), 2017 – 2021.
- **Google AI Essentials:** Google, Aug 2026.
- **McKinsey.org Forward Program:** McKinsey & Company, Jul 2026.
- **AZ-900 and AI-901:** Microsoft Azure Fundamentals and AI Fundamentals, In progress · exams in Nov 2026.
- **Leadership:** led AWS User Group Morelos and spoke on "EC2 vs. Lambda for Backend Devs".
- **Languages:** Spanish (native) · English B1 (working toward B2).
